Terminal overview

The Ingenico Lane 3000 countertop payment terminal integrates to a merchant's Point of Sale (POS) software.

- This solution supports the Planet payment application.
- The terminal powers on when the power supply is connected.

2. Menus and Network set up

- 1. From the Home screen, Enter password to access Menu (Password is provided by Planet Onboarding team)
- 2. The User can configure the network as DHCP or a Static IP. To do this, Navigate to Config from this first Main menu
- 3. Select Network from this second menu

- 4. Select LAN to continue
- 5. Select Config
- 6. Select relevant option here. To be confirmed by merchant User
- **7.** Then perform a Firmware update.
- Select Firmware
- 8. Press Green Enter button to continue
- **9.** TMS Port number is provided by Planet.
- The port number shown is normally the one to use.
- Press Green Enter button to continue

12a.

Lane/3000

- **10.** TMS TID is provided by Planet.
- Enter TID.
- Press Green Enter button to continue
- 11. Instance TID is provided by Planet
- Enter TID
- Press Green Enter button to continue
- The System will perform the update and reboot itself
- 12. From this Menu, under System the user can see options to Reboot if required
- 13. From this Menu, under Info the user can see TID, Firmware package details etc

2. Select Sale to process a Sale transaction from an original authorisation

3. Standalone Payments

1. As per previous steps, enter Password

to view the Main menu shown here.
